1. Transmittal of the translation to the applicant.

The International Bureau transmits herewith a copy of the English translation made by the International Bureau of the international reliminary examination report established by the International Preliminary Examining Authority.

2. Transmittal of the copy of the translation to the elected Offices.

The International Bureau notifies the applicant that copies of that translation have been transmitted to the following elected Offices requiring such translation:

EP

The following elected Offices, having waived the requirement for such a transmittal at this time, will receive copies of that translation from the International Bureau only upon their request:

JP, US

3. Reminder regarding translation into (one of) the official language(s) of the elected Office(s).

The applicant is reminded that, where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report.

It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned (Rule 74.1). See Volume II of the PCT Applicant's Guide for further details.

2. Citations and explanations

Document 1: "A Study on the Identification of Single Motor Units from a Multi-channel Surface Electromyogram by Blind Deconvolution (in Japanese)," (Takahiko Arimoto, et al.), Technical Research Report of the Institute of Electronics, Information and Communication Engineers, 12 March, 2002 (12.03.02), Vol. 101, No. 736, pages 159-166

Document 2: "Application of Blind Signal Separation Technique to the Motor Unit Active Potential Measurement by Surface Electromyogram (in Japanese)," (Hideo Nakamura, et al.), BME, 10 May, 2002 (10.05.02), Vol. 16, No. 5, pages 32-37

The constituent feature of the subject matter of claim 1, "(1) a motor unit position estimation section for estimating the position of the motor unit fired from the motor unit estimated to have acted in this motion unit separation section, and (2) a display section for displaying the motor unit estimated by this motion unit position estimation section as an image," is neither described in documents 1 and 2 cited in the ISR nor obvious to a person skilled in the art. So, the subject matter of claim 1 appears to be novel and to involve an inventive step. Furthermore, since documents 2-13 quote claim 1, they also similarly appear to be novel and to involve an inventive step.
